

Here's the App Store icons size table for different **Apple devices**:

Device or Context	Icon Size
iPhone	180px × 180px (60pt × 60pt @3x) 120px × 120px (60pt × 60pt @2x)
iPad Pro	167px × 167px (83.5pt × 83.5pt @2x)
iPad, iPad mini	152px × 152px (76pt × 76pt @2x)
App Store	1024px × 1024px (1024pt × 1024pt @1x)

App Icon Attributes

All app icons should adhere to the following **specifications**.

Attribute	Value
Format	PNG
Color space	sRGB or P3 (see Color Management)
Layers	Flattened with no transparency
Resolution	Varies (see Image Size and Resolution)
Shape	Square with no rounded corners

To publish your Store Listing in Google Play store, a **high-resolution icon** is required. The high-res icon does not replace your app's launcher icon but should be a higher-fidelity, higher-resolution version that follows these design guidelines:

- [Material icons](#) used through Android M;

- [Adaptive icons](#) for Android O.
-

Google Play Requirements

- 32-bit PNG (with alpha)
- Dimensions: 512px by 512px
- Maximum file size: 1024KB

The **App Store** and **Google Play** have different requirements and recommendations for a mobile icon design. Regardless of the OS for which you are creating the application, a good icon does not just grab the attention of app store visitors instantly, it also communicates your app's quality and purpose.
